From 21st to 23rd October 2013 in Ustroń was held an international scientific conference entitled “*Investments in Tangible and Financial Assets*”. The conference was organized by the Department of Investment and Real Estate of the University of Economics in Katowice and was connected with the jubilee of the 50th anniversary of Professor Halina Henzel's academic career.

The conference was opened by Professor Krzysztof Marcinek – Head of the Department of Investment and Real Estate, who

thanked all the participants for accepting the invitation and coming to the conference. The first day of the conference was dedicated to a researchers meeting regarding the future of the Real Estate Economics and Finance. During the next two days the participants had the opportunity to present their research results in the five plenary sessions. The first four sessions were devoted to the following issues: innovation in the real estate market, conditions for investment activity on the property market, the company on the investment market, innovation in

investing. During the last session some research works were presented by representatives from foreign universities.

The research that was presented during aforementioned panels mostly considered the issues of innovation emerging on the financial markets, creating new business models of investments, the appearance of information new conditions. These thematic groups and presented research papers suggest that the field of investment and real estate still possesses a considerable dynamism and appearing innovation creates interesting scientific challenges.
